703. Kth Largest Element in a Stream

Easy Topics

You are part of a university admissions office and need to keep track of the `kth` highest test score from applicants in real-time. This helps to determine cut-off marks for interviews and admissions dynamically as new applicants submit their scores.

You are tasked to implement a class which, for a given integer `k`, maintains a stream of test scores and continuously returns the `k`th highest test score **after** a new score has been submitted. More specifically, we are looking for the `k`th highest score in the sorted list of all scores.

Implement the `KthLargest` class:

- `KthLargest(int k, int[] nums)` Initializes the object with the integer `k` and the stream of test scores `nums`.
- `int add(int val)` Adds a new test score `val` to the stream and returns the element representing the kth largest element in the pool of test scores so far.

Example 1:

6.6K 262 6 Online

Java Auto

```
1  class KthLargest {
2      PriorityQueue<Inte
3      int k;
4
5      public KthLargest(
6          this.k = k;
7
8          for (int i = 0
9              add(nums[i
10         }
11     }
12
13     public int add(int
14         pq.add(val);
15
```
