322. Coin Change

Solved

Medium Topics

You are given an integer array `coins` representing coins of different denominations and an integer `amount` representing a total amount of money.

Return the **fewest** number of coins that you need to make up that amount. If that amount of money cannot be made up by any combination of the coins, return -1.

You may assume that you have an infinite number of each kind of coin.

Example 1:

```
Input: coins = [1,2,5], amount = 11
Output: 3
Explanation: 11 = 5 + 5 + 1
```

Example 2:

```
Input: coins = [2], amount = 3
Output: -1
```
